

Getting to know "Our Environment"

After doing worksheet #I-1, you know how to "navigate" through this portion of the www.kidfish.bc.ca. Now see if you can answer the following:

A.) Landscape

How did the ice of thousands of years ago help shape the landscape we have today?

What is the Fraser River Basin and explain its significance?

B.) Climate

On the back of this page make a chart. On one side identify each climatic region. On the other side note two important features of each region.

C.) Forests

Match each tree type to the area it grows best in.

Marshes and lakes

Englemann / White spruce

Mountain sides

Black Spruce

Northern forests

Alder

What role does fire play in determining the type of forest we have in BC?

D.) Animals

Why have most living things in BC not been here that long?

How did most of our species of plants and animals get here?
