

Getting to know “Aquatic Fish Foods”

After doing worksheet #I-1, you know how to “navigate” through this portion of the www.kidfish.bc.ca. Now examine the first part of “Aquatic Fish Foods” section more closely.

A) By each of the following statements, put a **T** if it is true or an **F** if it is false.

___ The word arthropods means jointed feet.

___ Centipedes and scorpions belong to the same group of insects

___ Insects have been grouped into 29 “orders or divisions

___ All insects go through metamorphosis

___ Every species of insect has its own special, two part Latin name.

___ All insects go through metamorphosis.

___ Complete metamorphosis is a three stage life cycle.

___ Simple or incomplete metamorphosis is a three stage life cycle.

___ In a complete metamorphosis, during the larval stage, the wings of the insect develop externally

___ Most insects and other aquatic fish food reproduce by sexual reproduction.

B) On the back of this sheet, **draw and label** the three types of life cycles that insects may go through. (Hint: for an example of an insect that does not go through a metamorphosis, examine the water boatman)
