

All About Lakes, Rivers & Fly Fishing Too!

Lake Ecosystem in the Shoal Area

Below you are going to draw a picture of weeds that would grow in a lake. Add to these weeds, drawings of

- very tiny fish
- small fish (example chubb)
- bigger fish (example trout)
- aquatic insects (some on the weeds, some swimming about, some smaller than the tiniest fish, some a little larger than the tiny fish)

In the circle area, draw a magnified area with a tiny fish (now appearing larger), an insect and many micro organisms which are extremely tiny one-celled organisms (use dots to represent)
